

# EDAN MEJIAS

Senior Product Manager · Cybersecurity & Developer-Facing Platforms

+1 (508) 863-9161 | [edanmejias@gmail.com](mailto:edanmejias@gmail.com) | [linkedin.com/in/edan-mejias](https://www.linkedin.com/in/edan-mejias)

## SUMMARY

---

Senior Product Manager with a track record across cybersecurity and developer-facing B2B SaaS, spanning SMB/MSP through enterprise markets. Currently leads strategy, roadmap, and go-to-market for an open-source software (OSS) supply chain security platform, scaling ecosystem coverage from 4 to 12 supported languages. Previously owned a \$30M+ ARR managed security SaaS portfolio at Malwarebytes, promoted into product management on a unanimous recommendation from Managed Services' global leadership after independently building the team's analyst training and certification program from scratch. Pairs security domain depth (vulnerability and CVE management, SBOM, dependency risk) with hands-on experience deploying AI-driven automation and turning technical infrastructure into clear customer and market value.

## PROFESSIONAL EXPERIENCE

---

### Senior Product ManagementSeptember 2025 – Present

#### ActiveState

- Inherited a stalled language support roadmap and had it back on track within two weeks of joining, then expanded supported language ecosystems from 4 to 12, extending pre-vetted, low-vulnerability coverage to 3x more enterprise developer teams.
- Identified the highest-traffic, most-vetted package in each supported ecosystem and built the "Base Component" coverage model around them, which became the foundation for the company's first new secure-language-component product line.
- Led go-to-market and sales-enablement strategy for the platform's RSA Conference presence, producing positioning and collateral that strengthened the company's standing in the OSS supply chain security market.
- Integrated LLM-based workflows (Claude, Gemini, Perplexity) into product discovery, requirements drafting, and competitive research, accelerating documentation cycles and sharpening market awareness.

### Product Manager, Managed Security ServicesOctober 2022 – September 2025

#### Malwarebytes

*Promoted from Specialist based on a unanimous recommendation from Managed Services' global leadership (1 senior director, 3 managers).*

- Served as lead product manager for two cybersecurity SaaS offerings in the SMB/MSP market, serving 6,500+ customers across 550,000+ endpoints.
- Drove 7% month-over-month growth across ThreatDown's bundle subscriptions, a \$30M+ ARR portfolio.
- Expanded the investigation types, tooling, and SOPs available to the analyst team to improve investigative efficacy, and led the group's first deployment of AI-driven task automation for analysts.
- Led migration of 6,000+ customer accounts and alert metadata to an upgraded SIEM + SOAR platform over six weeks, cutting overall case volume 70% and improving analyst investigation efficiency 33%.
- Led international, cross-team feature development that increased platform user interaction 55%.

### Specialist, Managed Security ServicesOctober 2021 – October 2022

#### Malwarebytes

- Founding member of Malwarebytes' Managed Security Services division.
- Independently designed and built the division's analyst onboarding program from scratch, including a new testing framework to screen and qualify candidates, with minimal senior direction. The program let the team hire qualified candidates faster and gave analysts a structured path to continuing education as they ramped to full service coverage, ultimately certifying 30+ analysts.
- Identified and drove improvements to the cloud platform and EDR product, prioritizing across multiple feedback sources to close competitive gaps.

## SKILLS

---

**Product:** Product Strategy, Roadmapping, Product Discovery, Prioritization, Go-to-Market, Sales Enablement, Competitive Analysis, Cross-Functional Leadership, Stakeholder Management

**Domain:** OSS Supply Chain Security, Vulnerability & CVE Management, Software Bill of Materials (SBOM), Dependency Risk, AI/Automation Strategy, B2B SaaS, SIEM/SOAR, EDR, MSP/SMB & Enterprise

**Tools:** Jira & Confluence, Figma, Power BI, Smartsheet, Lucidchart, Google SecOps, Google Workspace, Microsoft Office, LLM Tools (Claude, Gemini, Perplexity)
